

Developments in Paleoenvironmental Research

Volume 22

Series Editor

John P. Smol, Department of Biology, Queen's University, Kingston, Ontario,
Canada

Paleoenvironmental research continues to enjoy tremendous interest and progress in the scientific community. The overall aims and scope of the *Developments in Paleoenvironmental Research* book series is to capture this excitement and document these developments. Volumes related to any aspect of paleoenvironmental research, encompassing any time period, are within the scope of the series. For example, relevant topics include studies focused on terrestrial, peatland, lacustrine, riverine, estuarine, and marine systems, ice cores, cave deposits, palynology, isotopes, geochemistry, sedimentology, paleontology, etc. Methodological and taxonomic volumes relevant to paleoenvironmental research are also encouraged. The series will include edited volumes on a particular subject, geographic region, or time period, conference and workshop proceedings, as well as monographs.

Prospective authors and/or editors should consult the **Series Editor John P. Smol** for more details. Any comments or suggestions for future volumes are welcomed;
